Binary Data:

Format:

2. Schema Export: Select Binary Data unselected and use CSV as the format. Click Export Schema.

Export Schema

Binary Data:

Format:

### 3. Asset Export:

- From the User Console: Assets- Manage Assets. Select Type: *Asset Types*, Assigned Location: *All*, Status: *Both*, nothing in the attribute box or \*

Type	Assigned Location	Status	Attribute	Operator	Value			
Asset Types	All	Both				Go	<input checked="" type="checkbox"/> Auto-Start?	

- Select the following options when exporting as a CSV.

The image shows a dialog box titled "Export Assets" with a close button in the top right corner. On the left side, there is a blue question mark icon. The dialog contains three main sections:

- Export Style:** This section has two radio button options. The first is "Simple Export (Human readable data - File cannot be re-imported.)" and the second is "Advanced Export (Complex data for modification - File can be re-imported.)". The second option is selected and highlighted with a yellow background.
- Attributes to Export:** This section has two radio button options. The first is "Export all asset attributes" and the second is "Export asset attributes in view". The first option is selected and highlighted with a yellow background.
- Include binary data:** This section has a checked checkbox labeled "Include binary data", which is also highlighted with a yellow background.

At the bottom of the dialog, there are three buttons: "Export JSON", "Export CSV", and "Cancel".
